POWER PLATFORM DEVELOPER · SOLUTION ARCHITECT

Power Apps · Power Automate · Dataverse · Power BI · SharePoint Online | 7+ years supporting U.S. Department of Energy programs

SUMMARY

Power Platform developer and data architect with 15+ years building the applications, automation, and reporting that operational leaders actually use. Seven years embedded on a U.S. Department of Energy contract at the Fermilab Site Office, owning solutions end to end — requirements through data modeling, build, deployment, and support — for a federal oversight organization. Earlier, delivered the enterprise BI layer at General Motors across 1,128 dealerships. Effective in regulated, documentation-heavy environments and fluent translating between contracting officers and technical delivery.

CORE TECHNICAL SKILLS

Power Platform: Power Apps (Canvas, Model-Driven), Power Automate cloud flows, Dataverse, Power Fx, Power Query, Dataflows, approvals and Adaptive Cards, solution packaging, environment and tenant migration, Power Platform administration

Business Intelligence: Power BI Desktop and Service, advanced DAX, star-schema data modeling, Power Query/M, Tableau, Excel

Data & Integration: SQL Server, Oracle, SharePoint Online lists and libraries, REST APIs, JSON, ETL pipelines, data governance, data quality controls

Microsoft 365 & Cloud: SharePoint Online, Teams, Outlook, Microsoft Entra ID, Azure, Microsoft Copilot; Microsoft Fabric and Purview (in progress)

Programming: Power FX, SQL, Python, JavaScript, C#, M, VBA, HTML/CSS

Delivery: Requirements gathering with non-technical stakeholders, UI/UX and accessibility-minded design, technical documentation, knowledge transfer, federal contract delivery

PROFESSIONAL EXPERIENCE

RER Solutions, Inc. — U.S. Department of Energy, Fermilab | Warrenville, IL

Program Management Analyst (Power Platform Developer & Data Architect) | November 2018 – Present

- Own end-to-end delivery of Power Platform solutions for the DOE Fermilab Site Office and Argonne Site Office — gathering requirements directly from contracting officers, then modeling the data, building the apps and flows, deploying, and supporting them in production.
- Built PAR+, the custom Power Apps solution federal staff use to conduct and record contractor safety inspections, increasing captured oversight data 282% over the manual process it replaced.
- Redesigned the PAR+ interface around usability and accessibility standards, prototyping layouts in HTML to validate them with end users before implementing in Power Apps Studio — reducing rework and post-release change requests.
- Automated recurring contracting-officer workflows with Power Automate, including a multi-stage sequential approval process with Outlook-compatible HTML notifications and Teams Adaptive Cards, cutting manual routing effort and shortening response times.
- Architected star-schema data models unifying SQL Server, Oracle, and SharePoint Online sources in Power BI, replacing siloed manual reporting with governed datasets tuned for query performance and scale.
- Designed and deployed interactive Power BI dashboards using advanced DAX, giving Site Office leadership a single view of contractor performance and oversight status.
- Planned and executed a tenant and environment migration covering the organization's full Power Platform estate — Power Apps, Power Automate, Power BI, and SharePoint — producing a pre-migration backup runbook and solution inventory that made the cutover auditable and reversible.
- Established data quality checks, documentation standards, and knowledge-transfer materials to meet federal recordkeeping and organizational compliance requirements.

General Motors | Naperville, IL

Business and Data Analyst | December 2016 – November 2018

- Built and maintained the Power BI and Tableau reporting layer for GM's North Central Region, covering 1,128 dealerships and giving field managers real-time sales and inventory visibility.

- Delivered dashboards and regional forecasting models that supported \$50M in sales growth (6.1% YoY) by surfacing performance gaps early enough for field teams to act on them.
- Served as regional subject-matter expert for Power BI, Tableau, SQL, VBA, and Excel — training field teams and mentoring junior analysts across North America.
- Standardized reporting processes with cross-functional partners and led executive reviews that tied sales performance insights to regional planning decisions.

eBlaze Services, Inc. | Chicago, IL

Partner, Data Solutions & Business Development | January 2008 – December 2016

- Co-owned a data solutions practice; designed and deployed a real-time pricing and forecasting database for procurement operations, with SQL and Python ETL pipelines that reduced data latency 40%.
- Built KPI, financial ratio, and sales performance dashboards, and automated weekly and monthly reporting workflows that eliminated 20+ hours of manual effort per month.
- Led pricing and product performance analysis that identified underperforming SKUs and informed adjustments contributing to a 15% YoY gross margin increase.

SELECTED PROJECTS

GSPro Shot Analytics Dashboard | trwells.com · github.com/trwells2

- Built and host a full-stack golf shot analytics application in React and Recharts, featuring club-segmented visualizations, a custom distance-weighted consistency metric, a paginated shot feed, and CSV export.
- Architected a Cloudflare Worker as a server-side API proxy so the Google Sheets credentials never reach the client, keeping a live spreadsheet usable as the application's data source without exposing the key.

Python Data Pipelines & API Integrations | personal

- Write Python collection and normalization pipelines against third-party market data APIs and the Google Sheets API (service account auth), with scheduled runs, retry and resume logic, and structured logging.

EDUCATION

Eastern Illinois University, Lumpkin School of Business | Charleston, IL

Bachelor of Science, Finance | May 2009

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

Microsoft Fabric and Microsoft Purview learning paths (in progress).
